

# Scope V2

**Scope V2** - is a demo version of a web application developed for quote preparation.

With this simple demo, you can see how to make working with tables easier by combining the best features from Excel with all the advantages of a web application. Try to create a commercial proposal!

## Functionality

- Select chapters and categories of costs
- Fill in the tables and interact with them as in Excel, with simple features such as:
  - Add, edit, and delete data in editable cells
  - Copy, paste, and cut values
  - Auto-fill values to cells
  - Interact with tables with a keyboard: navigate with arrows, fill in data and use hotkeys (Ctrl+C, Ctrl+V, Ctrl+Z, Ctrl+X)
- Use customized table fields: set up comments by dropdown and checkbox
- Add comments to fields, read them, and delete them
- Calculate sums for selected chapters and categories
- See the visualization of your costs on a graph, and if you are distracted - hide it
- Change formulas with edit mode
- Enlarge the table with full-screen view and immerse yourself in editing the table completely
- Copy-paste values to Excel and back without destroying the formulas in the app

There may be much more in the future app. You will use **not just Excel, but even more!**

## Future functionality

- Customize your tables the way you want: use one-click checkboxes, easy-to-use dropdowns, calendars, recalculate in any currency and much more
- Work with tables from anywhere you want, with a laptop or tablet
- Switch easily from Excel to the app - the user experience is as similar as possible
- Feel no stress while working - you won't destroy formulas
- Separate roles within your team - tables administration for power users
- Collaborate with your colleagues - edit tables together
- Always be on the cutting edge - deliver app updates to all users at once
- Calculate and store data separately - don't get distracted
- Don't be afraid of losing your data - store your data in one place, use backup and logging
- Safely work offline - the changes will be uploaded to the system with internet access
- Don't distract yourself with unnecessary functionality - see only what is needed

## Technology stack:

Jspreadsheet V8, Angular 16.1.2 + Material UI.
